

arplsbaseline Package Test Plan

Jessica Sam

Note: if only wanting to run the developer unit tests, then the following commands can be used, with the assumption that the package `testthat` is installed in to the user's R packages.

```
testthat::test_dir(system.file("tests", package = "arplsbaseline"), reporter = "summary")
```

Full Testing Instructions

This test plan should cover all different cases that need to be tested. The baseline function is the most important function that requires testing. This requires testing:

1. Input Validation

Input Validation
